DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 4, 12 – 17 and 21, drawn to a structure for joining abutting ends of two webs of labels, classified in class 428, subclass 40.1.
 - II. Claims 5 – 11, 22 – 23, drawn to a structure for supplying heat shrinkable labels, classified in class 40, subclass 138.
 - III. Claims 18 – 20, drawn to a container having sidewalls, classified in class 428, subclass 34.1.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it is not necessary for the abutting ends to be overlapping. The subcombination has separate utility such as labels which are not used with a labeling machine.
3. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 1772

case, the combination as claimed does not require the particulars of the subcombination as claimed because it is not necessary for the abutting ends to be overlapping. The subcombination has separate utility such as labels which are not used with a container.

4. Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it is not necessary for the splice and webs to have equivalent shrinkage rates. The subcombination has separate utility such as labels which are not used with a container.

5. Because these inventions are distinct for the reasons described above, and have acquired a separate status in the art because of their recognized different classification and subject matter, and because the searches required for the groups are not the same, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. Thomas Durling on May 28, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
